#### INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/US 03/27081

#### ad item I .:

There is no support in the application as originally filed for the last two process steps of new claim 3 of the present application contrary to the provisions of Article 19(2) PCT. This subject matter will be disregarded in the evaluation of novelty and inventive step in the following item V.

#### ad item V.:

None of the documents cited in the international search report discloses or fairly suggests a functional polymer having a sulfur containing heterocycle as terminating functional group as defined in claim 1 of the present application. A method for preparing a functional polymer by terminating a living polymer with a functionalizing agent containing a sulfur heterocycle and a method for curing a rubber formulation containing said functional polymer and a filler is also neither known from nor suggested by the prior art.

The subject matter of claims 1 - 9 of the present application (insofar as they comply with Article 19(2) PCT) is therefore considered to fulfil the requirements of Article 33(2) - (4) PCT.

#### additional remarks:

The description and worked examples remain to be adapted to the limitations of claim 1 (Article 6 PCT).

CLAIMS

10/526132 DT01 Rec'd PCT/PT

What is claimed is:

P02039WO2A(P342

A functional polymer that is defined by the formula

π-R1-α

where  $\pi$  is a polymer chain,  $R^1$  is a bond or a divalent organic group, and  $\alpha$  is a sulfur-containing heterocycle selected from a thiirane, thietane, thioxanthene, dihydrothiophene, thiadiazine, thiazoline, phenoxathiin, dihydroisothiazole, or thienofuran group or substituted form thereof.

10

15

20

25

30

A method for preparing a functional polymer, the method comprising: 2. terminating a living polymer chain with a functionalizing agent where the functionalizing agent is defined by the formula

Z-R4-α

where Z is a leaving group or an addition group, R4 is a bond or a divalent organic group, and  $\alpha$  is a sulfur-containing heterocycle selected from a thiirane, thietane, thiolane, thiazoline, dihydrothiophene, thiadiazine, thioxanthene, thianthrene, phenoxathiin, dihydroisothiazole, or thienofuran group or substituted form thereof.

A method for preparing a cured tire component, the method comprising: 3. providing a rubber formulation comprising at least one vulcanizable rubber and a filler, where the at least one vulcanizable rubber is a functional polymer that is defined by the formula

 $\pi$ -R<sup>1</sup>- $\alpha$ 

where  $\pi$  is a polymer chain,  $R^1$  is a bond or a divalent organic group, and  $\alpha$  is a sulfur-containing heterocycle selected from a thiirane, thietane, thiolane, thioxanthene, thianthrene, thiadiazine, dihydrothiophene, rhiazoline,

AMENDED SHEET (ARTICLE 19)

5

15

phenoxathiin, dihydroisothiazole, or thienofuran group or a substituted form thereof;

forming the nubber formulation into a green tire component; vulcanizing the green tire component to form a cured tire component.

4. The polymer of claim 1, or the method of claim 3, where the functional polymer can be defined by the formula

$$\pi - R^{1} - R^{3}$$

$$R^{2} - R^{3}$$

$$R^{2} - R^{3}$$

where  $\pi$  is a polymer chain,  $R^1$  is a bond or a divalent organic group, each  $R^2$  is independently hydrogen or a monovalent organic group, each  $R^3$  is independently hydrogen or a monovalent organic group, or where each  $R^3$  combine with each other to form a divalent organic group; or where the functional polymer can be defined by the formula

$$\pi$$
 $OR^5$ 
 $\pi$ 
 $Si$ 
 $R^6$ 
 $OR^5$ 

where  $\pi$  is a polymer chain, each  $R^5$  is independently a monovalent organic group,  $R^6$  is a bond or a divalent organic group, and  $\alpha$  is a sulfur-containing hererocycle.

The polymer of claim 1, or the method of claim 3, where R<sup>1</sup> includes the residue of an addition reaction between an addition group and a living polymer, and wherein the addition group comprises a nitrile group, a Schiff base, a ketone group, an aldehyde group, or an ester group.

5

- 6. The polymer of claim 1, or the method of claim 2 or 3, where the polymer chain is a rubbery polymer having a Tg that is less than 0°C.
- 7. The polymer of claim 1, or the method of claim 2 or 3, where the polymer chain is polybutadiene, polyisoprene, poly(styrene-co-butadiene), poly(styrene-co-butadiene), poly(styrene-co-butadiene-co-isoprene), poly(isoprene-co-styrene), or poly(butadiene-co-isoprene).
- 8. The method of claim 2, where Z comprises a halide, a thio alkoxide group, an alkoxide group, a dialkyl amine group, a nitrile group, a Schiff base, a kerone group, an aldehyde group, or an ester group.
  - 9. The method of claim 3, where the filler is carbon black, silica or both.
